

Abdul Hadi Shah

Full Stack and ML Engineer

Bangalore, Karnataka | +91- 9545267216 | hadishah.work@gmail.com | [in] [linkedin.com/in/hadishah123](https://www.linkedin.com/in/hadishah123)

Github: <https://github.com/hadishah123> | Portfolio: <https://hadishah.vercel.app>

SUMMARY:

Full-Stack & ML Engineer skilled in Python, JavaScript, NLP, and modern AI frameworks. Experienced in building end-to-end LLM applications using LangChain, Hugging Face, FastAPI, and RAG pipelines. Integrated ML models into React + Express.js apps and improved retrieval accuracy while reducing API latency by 90%. Focused on solving real-world problems through data, automation, and AI-driven systems.

WORK EXPERIENCE:

Full Stack & ML Engineer

January 2025 - Dec 2025

Pantech.ai, Ashok Nagar, Chennai

(11 months)

- Built end-to-end learning analytics features including data pipelines, ML models, scalable **APIs (FastAPI/Express)**, and instructor dashboards.
- Developed NLP-based recommendation systems and production-ready **ML pipelines** using **Scikit-learn, Transformers, and vector databases**.
- Improved system speed by **80%+** through better preprocessing, caching, and faster model inference.

Data Science Intern

June 2024 - Nov 2024

IStop.ai, Bengaluru, Karnataka

(6 months)

- Built a loan prediction system using Linear Regression, Random Forest, and XGBoost (**90%+ accuracy**)
- Performed EDA using Python, SQL, and Pandas to analyze financial behavior and improve feature engineering
- Applied PCA to reduce dimensionality, improving training speed by **45%**
- Created visual dashboards and clustering insights for decision-making

PROJECTS:

AI Resume Analyzer — Backend (FastAPI + NLP)

Link: <https://github.com/hadishah123/resume-analyzer-ai>

- Built an NLP-powered resume analysis system using OCR, parsing, and KeyBERT for keyword extraction
- Implemented semantic similarity-based job matching using embeddings
- Integrated GPT-based suggestions to generate actionable resume improvement feedback
- Designed scalable FastAPI backend for efficient text processing and analysis

SnackHub — Production-Ready MERN Food Delivery Platform

Link: <https://github.com/hadishah123/snackhub> · [Live Demo](#)

- Engineered a full-stack food delivery platform using MongoDB, Express, React, and Node.js (MERN)
- Implemented **hybrid authentication** (Google, Email/Password, Phone OTP) using Firebase with JWT-secured APIs
- Integrated **Razorpay payment gateway** with server-side verification to ensure secure transactions
- Built a **real-time order tracking system** with dynamic status updates and role-based workflows (Admin/Customer)

SKILLS:

Machine Learning: Regression, Clustering, Decision Trees, Random Forest, XGBoost, PCA, Data Preprocessing

NLP & Deep Learning: Transformers (T5, GPT), RNN, LSTM, Embeddings, RAG, TF-IDF, Word2Vec, NER, Hugging Face (LoRA – Beginner)

Frameworks & Libraries: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV, NLTK, OCR

Backend & APIs: Python, FastAPI, Node.js, Express.js, REST APIs

Frontend: React, JavaScript, HTML/CSS, Tailwind CSS

Databases: MongoDB, MySQL, Vector Databases

Tools & DevOps: Git, Docker, CI/CD, Nginx, Vercel, Netlify
